The Center for Pollinators in Energy

Or some other photo!

Highlighted by the U.S. Department of Energy, the U.S. Department of Interior’s National Conservation Training Center, and the Electric Power Research Institute, Fresh Energy has become a nationally-recognized source of expert knowledge on solar sites planted with deep-rooted native flowers and grasses that capture and filter stormwater, build topsoil, and provide abundant and healthy food for bees and other insects that are valuable to agriculture.

The Center for Pollinators in Energy is a national clearinghouse and catalyzer of pollinator-friendly solar information, standards, best practices, and state-based initiatives.

Success Stories

To be developed; possibly work with a ghost writer to build out a library of collaborations with businesses and farms, etc.
